News Release

A High-End Network and Environment Management Solution Developed for a Leading Business-Continuity Products Vendor

WebSilicon (www.web-silicon.com) will develop and provide an integrative network and environment management solution for a leading business continuity products vendor. The system facilitates control and monitoring of various IT systems, environmental sensors and machinery with an off-the-shelf, user-friendly solution that integrates into a single appliance.

The system is designed for network and project infrastructure integrators, technology outsourcing companies, global hardware distributors, telecom and utilities infrastructures that need to create and provide full, centralized, business continuity picture in order to have a real understanding of the current health and risks.

Being a scalable Machine-to-Machine (M2M) solution, that can suite anything from a small control closets via remote sites, to large data centers. The modular design allows for changing I/O cards according to individual site's needs and configuration. Third-party sensors can be easily integrated to accommodate specific monitoring needs.

The All-In-One approach allows integration of monitoring and control capabilities to cover not only servers, switches and other network devices but also industrial machines, temperature, humidity and low voltage systems.

Under the contract, WebSilicon develop and provide both the hardware and system software. "We are proud to be selected by a leading player in the business continuity arena. It is a true vote of confidence in the ability of WebSilicon to provide complete end to end solutions where both product flexibility, complexity of the design and high availability are required." said Iftah Bratspiess, WebSilicon CEO.

With extensive background and vast experience in Network Management and Element Management System development aspects, WebSilicon offers development outsourcing services on a turnkey basis.

WebSilicon develops fully customized hardware and software products, enabling management of devices in network environment using standard protocols and cross-platform Web-Based Management architecture.

Active since 1998, with track record of over 70 successfully accomplished projects for customers in telecom, datacom, optical systems, power, etc. WebSilicon offers professional R&D services to OEM's, system integrators, service providers, and operating companies.
