News Release

WebSilicon to Provide Satellite Ground Station Management System Compatible with Comtech EF DATA equipment to Gilat

WebSilicon (www.web-silicon) received an order to provide a management system for a satellite ground station to Gilat Satellite Networks (Nasdaq:GILT).

The NMS will be based on WebSilicon's standard NMP components and will include support for satellite communication equipment of Comtech EF DATA as well as Cisco Ethernet switches.

The system will incorporate a distributed redundancy engine that will be responsible for the failsafe operation of the network under various fault conditions in both the hub and remote sites.

"One of the key advantages of selecting the solution from WebSilicon is the ability to easily integrate multi-vendor networking equipment into a single robust network, providing the entire range of management features." Said Mr. Yossi Appleboum, VP R&D of WebSilicon. "A single management system will cover the satellite section as well as the intra-hub switching and routing sections of the network, and will be able to provide redundancy paths using algorithms that were not possible based on the vendor's management systems."

"We are extremely proud to have Gilat Satellite Networks as a new customer, and sure to be able to provide more of our solutions and bring significant value to the network installations of Gilat worldwide." said Mr. Iftah Bratspiess, WebSilicon CEO.

Active since 1998, with track record of over 70 successfully accomplished projects for customers in telecom, datacom, optical systems, power, etc. WebSilicon offers professional EMS and NMS platforms and professional services to OEM's, system integrators, service providers, and operating companies.

Gilat Satellite Networks provides satellite and broadband wireless networks and professional services, including turnkey solutions and outsourcing, to operators worldwide.

As a leading provider of high performance VSAT satellite network systems, Gilat works closely with providers and operators around the globe to deliver services ranging from interactive data to video, broadband IP, public telephony and corporate VoIP services.

Gilat also provides solutions tailored to the requirements of individual industries. Based on the flexible and open SkyEdge system, the solutions provide added value to operators through better performance, tighter integration and simpler deployment.
