News Release

WebSilicon Delivers SNMP Agent for Extricom WLAN Switches

WebSilicon (www.web-silicon.com) has won a contract to deliver the SNMP agent for Extricom WLAN switches based on Extricom hardware and Linux O/S.

The Extricom Interference-Free™ Wireless LAN provides an unmatched combination of simplicity and performance, enabling companies to confidently and cost-effectively transform their operations wirelessly. An essential aspect of this transformation is the ability to efficiently manage multiple Extricom WLANs in a centralized manner – achieved by the specific distributed agent architecture and the flexible deployment scheme that are provided by WebSilicon.

The SNMP agent seamlessly integrates with Extricom's complete line of enterprise switches and access points, providing easy, standards-based systems administration, configuration, and monitoring.

The management system that is composed of the Extricom EXNM-2000 NMS and the set of agents supports medium-to-large-scale enterprises that have deployed up to 2,000 Extricom WLAN switches. It runs on standard enterprise server platforms and uses the MySQL 5.0 database to maximize affordability and flexibility.

"We are extremely proud to have Extricom as our client and integrating our agent infrastructure." Said Mr. Yossi Appleboum, VP R&D of WebSilicon. "WebSilicon continues to strengthen its position among WIFI and WiMAX system vendors that leverage the stability and maturity of our SNMP platforms. We usually deliver production ready solutions within one quarter and the Extricom system will be no different."

Extricom (www.extricom.com) is the designer and manufacturer of an award-winning Wireless LAN System which represents a new generation of enterprise WLAN infrastructure for providing converged data, voice (VoWLAN), and video services.

This unique wireless system delivers the lowest total cost of ownership, at the same time as achieving a performance leap in capacity, coverage, and seamless mobility. All this, while making deployment and management radically easier than anything in the market today.

Active since 1998, with track record of over 120 successfully accomplished projects for more than 40 customers in telecom, datacom, optical systems, power, etc. WebSilicon offers professional EMS and NMS platforms and professional services to OEM's, system integrators, service providers, and operating companies.
