SOS Industrial Electronics Selects WS-400 as Management Agent

SOS Industrial Electronics, a leading South-Africa based manufacturer of Power Supplies, DC-DC Converters & Special Products for Communications Systems has selected the WS-400 platform from WebSilicon as an integrated management agent.

Integrated with the Telecom product line, the WS-400 provides the complete set of local and remote management interfaces required by Telco carriers such as SNMP agent, embedded web interface, command line access, user security and more.

The system supports a software update option for SNMPv3 that is intended for use by security oriented integrators and end customers such as tier-1 operators and governmental bodies.

The WS-400, optimized for power electronics and infrastructure products has already been in use by some of the leading vendors of UPS and telecom power systems for five years, as part of high availability power systems. The WS-400 comprehensive software suite is currently being significantly enhanced adding newer network protocols and security related features such as 802.1X, RADIUS, SNMPv3 and more.

The WS-400 gains popularity among Power Distribution Systems' vendors for both AC and DC applications. The platform incorporates interfaces for constant voltage and current sensing, sequential power cycling, UPS communications and more.

Optional communication channel is an integrated cellular modem (GSM/GPRS or UMTS/HSDPA) that can be used in installations in rural sites where no native IP communications are available.

For more details regarding the WS-400 platform please visit our web site.

Active since 1998, with track record of over 140 successfully accomplished projects for more than 60 customers in telecom, datacom, optical systems, power, etc. WebSilicon offers professional EMS and NMS platforms and professional services to OEM's, system integrators, service providers, and operating companies.
